WL-Smartlam7500B-8 Full Auto Laminator

- Designed specially for the production of conventional plastic cards, contact cards, contactless cards , RFID cards, etc.
- Fully integrated and automated system
- Metal Clad platens to avoid the platens out of shape during heating
- Fully automatic material transferring process via shift fork system under servo motor control
- Precise temperature uniformity across the heating tower during material heating phase of the lamination cycle of $\pm 2^{\circ}\text{C}$ due to the efficient transfer of thermal fluid heat energy
- Precise pressure uniformity of ± 0.1 MPa
- Innovative hydraulic accumulator system allows the constant pressure without separate operation of the hydraulic pumps
- Hydraulic system is utilized only during press closing and pressure rising for less noise and wear
- Using friendly PLC touch screen system with self diagnostic prompts and modem interface facility

- Automatic platen re-alignment process during every lamination cycle
- 4 cylinder, twin pump hydraulic facility for both hot tower and cold tower.

Model	WL-Smartlam7500 Full-Auto Laminator
Cooling Method	Water Cooling
Heating Method	Electric Heating
Pressure Stages	Heating 12 stages/cooling 5 stages
Pressure Precision	± 0.1 MPa
Temperature Precision	0-200°C ± 2 (°C)
Laminating Plate Smoothness	± 0.05 mm
Laminating Plate	Aluminum Alloy
Hydraulic Cylinder	4 for each tower
Pressure	0-16Mpa
Laminating Plate Size	600mm×750mm
Opening	8
Opening Space	60mm
Laminating Plate thickness	48mm
Electric	380V ,50/60HZ, 80 KW
Dimension	L4,900* W 3,670* H2500mm
Weight	8,000 KGS
Output	18000 cards/hour
